It's easy to upgrade. DTCO Retrofit Kit for Service Diagnostic Systems.

SDS product information

As a result of the introduction of digital tachographs, commercial vehicle manufacturers will be fitting their vehicles with new DTCO 1381 tachographs from Siemens VDO. Siemens VDO offers service diagnostic systems which are suitable for workshop use for testing and programming this new generation of tachographs. Workshops also have the convenient option of upgrading their existing diagnostic systems so they can test the new DTCO 1381 tachographs.

DTCO retrofit kit (product code 1602-89-910-00)

- Test cable

- Operating instructions
- Software update to version 7.50
For the software update, the relevant Siemens VDO dealer will load a new program (version 7.50 or higher) onto the test system's BTC.

Functionality/options

- The familiar handling of the MTCO's test device is expanded to include DTCO 1381 requirements.
- Transferring test results from the rolling road test computer ATC or mobile test computer MTC to KIPAS via a serial interface makes inspection work easier and reduces the scope for transfer errors.
- The retrofit kit fits the interface adaptor for the MTCO. If this is not available, the retrofit set for the MTCO can be ordered (product code 1602-89-902-01), consisting of the interface adaptor (product code 1602-78-170-00) and MTCO diagnostic cable (product code 1602-78-171-00).

Operating instructions

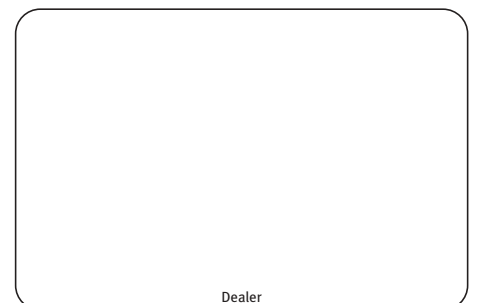

If required, one of the following sets of operating instructions can also be ordered, depending on the SDS test system being used:

For use with MTC:

- Order no. BA00-1602-0410330

For use with ATC:

- Order no. BA00-1601-2610230
